

# ELEVEXO-H – TARGETED HAIR REGENERATION FORMULATION

EleveXo-H is a professional-grade, regenerative hair formulation developed for medical professionals. Averaging 70 billion protein particles carrying diverse exosome cargo such as miRNA, mRNA, proteins, lipids, growth factors, peptides, extracellular matrix components, collagens, and hyaluronic acid, produced under cGMP and cGTP standards.

## PRODUCT OVERVIEW

EleveXo-H is a clinical-use topical formulation designed to support the biological environment required for healthy hair growth. Using exosome-based technology, it delivers a synergistic blend of bioactive components directly to the scalp to influence follicle signaling, support vascular health, and promote tissue regeneration.

It targets multiple pathways involved in the hair growth cycle to support follicular activity and extend the anagen growth phase, with early improvements often observed within 6-8 weeks of consistent professional application.

## KEY SPECIFICATIONS & CLINICAL ADVANTAGES

- **Formulation:** Advanced topical serum with stabilized growth factors and biomimetic peptides.
- **Primary Action:** Supports hair follicle repair, anagen phase extension, and scalp microenvironment health.
- **Application Protocol:** For professional use as needed, ideally paired with adjunctive therapies (e.g., microneedling, PRP, LLLT).
- **Target Outcome:** Supports improved hair growth, density, thickness, and scalp condition.
- **Safety Profile:** Designed for external use in a professional clinical setting.

## MECHANISM OF ACTION

EleveXo-H supports key biological processes to address the root causes of hair thinning:

- **Reactivates Follicular Signaling:** Targets dormant follicles to help re-enter the growth (anagen) phase.
- **Enhances Vascular Support:** Promotes perifollicular microcirculation to improve oxygen and nutrient delivery.
- **Supports Tissue Health:** Aims to maintain dermal papilla and scalp structural integrity.
- **Promotes a Balanced Scalp Environment:** Helps manage oxidative stress and inflammation.

## INDICATIONS & USE CASES

- Thinning hair and reduced hair density.
- Support for scalp health and follicular function.
- Pre- and post-procedural regenerative support (e.g., PRP, microneedling, stem cell therapies).
- Adjunctive use with Light (LLLT) and other energy-based hair restoration devices.

## KEY ACTIVE COMPONENTS

**Growth Factors:** A precise blend to reactivate the hair cycle and support follicular vitality.

- IGF-1 (sh-Oligopeptide-2):**  
Supports follicular matrix cell proliferation and helps maintain the anagen phase.
- VEGFA (sh-Polypeptide-9):**  
Enhances angiogenesis and vascular support around the follicle for improved nutrient delivery.
- Noggin (sh-Polypeptide-13):**  
Helps inhibit BMP signaling to support follicular stem cell activation and the telogen-to-anagen transition.
- HGF (sh-Polypeptide-62):**  
Stimulates dermal papilla cell activity and supports perifollicular microcirculation.
- SCF (sh-Polypeptide-4):**  
Contributes to follicular keratinocyte health and supports hair follicle integrity.

**Biomimetic Peptides:** Engineered to mimic natural biological messengers.

- GHK-Cu (Copper Tripeptide-1):**  
Supports angiogenesis, collagen production, and follicle matrix activity.
- AHK-Cu (Copper Tripeptide-3):**  
Promotes follicular cell proliferation and visible hair density.
- Phyto-NEP (Caffeoyl sh-Decapeptide-9):**  
A plant-derived peptide designed to help modulate scalp inflammation and oxidative stress.

**Supportive Actives:** For scalp repair and optimal follicle function.

- PDRN (Polydeoxyribonucleotide):**  
Promotes tissue repair, angiogenesis, and regenerative signaling within the scalp.
- Low Molecular Weight Hyaluronic Acid:**  
Supports scalp hydration, tissue elasticity, and active ingredient absorption.

## CLINICAL USE & PROTOCOL

- Application:** For external use only in a professional setting. Apply as part of a structured treatment protocol.
- Expected Response:** Early improvements in hair texture or density may be observed within 6–8 weeks; ongoing use supports cumulative results.
- Synergistic Pairing:** Enhances outcomes when used with microneedling, PRP, stem cell therapy, and low-level light therapy (LLLT).
- Storage:** Store in a cool, dry location. Avoid contact with eyes or mucous membranes.
